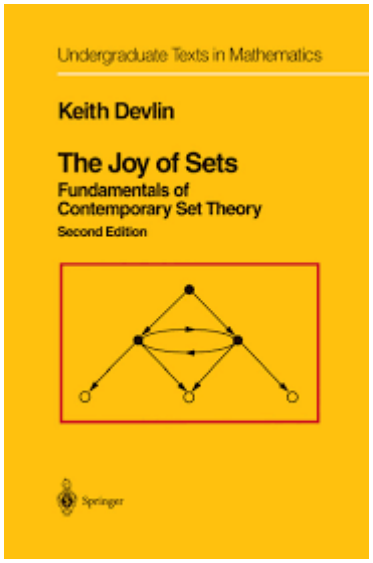
Changing Facts – Mathematics of Events



By Shomit Sirohi

I. Mathematics and Processes – Observing Minimalism and Change

A process is just mathematical formalism – after the process is finally a subjective process which then is in history proven to be a given-structure. It means temporality and objective phenomenology prove a certain structure, of mathematics that is in fact the objective order of even humanities, which proves in fact a minimalism of mathematics applicable to reality but in fact minimalism – not the maximal avant-garde theses, but in fact the minimal theses – that a fact is scientific, mathematical or social. In fact social is then the transfiguration of mathematical to social, in a torsion of referral of the simple process representation and presentation as just presentation or in fact a demonstration of the fact that there is a fact.

II. Changing Facts

1967 – 1999 – Argentine working class – a mathematical period of class action.

III. Science – Marxism

A Radio-graphic truth.
